ABSTRACT

The prosody scale is one of the most difficult scales presented to the student in the bachelor's degree, as it is classified as a pure linguistic science that is based on foundations and rules that contradict grammar and declension, and this is what makes it more difficult for the student to understand. Especially the first year bachelor's degree stage, where it is provided with sciences such as: grammar ,declension, rhetoric, and prosody. Accordingly, the latter constitutes a great concern for the audience of this stage, specifically in terms of application and understanding the used symbols and signs, which leaves us facing a problem that is difficult to solve about what is the most effective way to teach and facilitate the prosody lesson in front of the student? Taking the lesson of prosodic circles as a model to overcome the difficulties related to understanding them. It started with the theoretical aspect, which contains important definitions related to the research topic, leading to the applied aspect to learn the methods of teaching the prosody lesson.
